

ORGANIC SULFUR MAY BE THE SECRET TO BOUNDLESS ENERGY

By Dale Komai, Your Premier MSM Organic Sulfur Distributor

How Do You Avoid Pain After Workouts?

What do you do to stay healthy and fit? Do you skate or take long bike rides or work out at the gym? Perhaps your chosen form of exercise is to swim or jog or play tennis or golf? Or maybe you spend hours outside tending your garden or hiking along mountain trails. Whatever activity you choose to engage in, you'll likely continue as long as you don't end up feeling extremely sore and out-of-breath for an excessive amount of time. On the other hand, would it interest you to know that there is a natural food supplement available to help you.

Pain-Killing Relief From Wood Pulp Waste

Who would have thought that Dr. Stanley Jacob and Dr. Robert Herschler – two chemists originally employed by Crown Zellerbach – would discover an amazing and natural pain-killing substance out of the lignin waste that was being generated at paper and pulp processing plants?

As one of their many research experiments, the two chemists tried oxidizing the wood pulp. In doing so, they stumbled upon an organic sulfur compound called dimethylsulfoxide (DMSO) that when applied

topically, could speed up healing from cuts, burns, and sprains. Industrial workers afflicted with arthritis and asthma also noticed that they felt better after coming in contact with DMSO water. Other medicinal uses for DMSO were found and documented in research papers after the original discovery. DMSO, however, is noteworthy for its peculiar odor and can cause skin irritations when applied topically. After further experimentation, researchers came up with a white crystalline and edible form of DMSO called methylsulfonylmethane

(MSM, for short) that has similar medicinal qualities without the odor and skin irritation.

In subsequent years, Dr. Jacob became a leading advocate and pioneer in the MSM movement, using the substance to treat a host of common health ailments, including carpal tunnel syndrome, fibromyalgia, muscle aches, lower back pains, whiplash, and sports injuries such as tennis elbow. In 1999 Dr. Jacob and Dr. Ronald M. Lawrence co-authored one of the definitive books on the subject called "The Miracle of MSM: The Natural Solution for Pain."

ORGANIC SULFUR MAY BE THE SECRET TO BOUNDLESS ENERGY – PAGE 2

Why Sulfur Is Critical for Our Health

Sulfur is one of the 24 essential minerals of life. Every day we consume up to 750 mg of sulfur and a fresh supply needs to be provided every 12 hours. Sulfur possesses detoxification properties that enable the mineral to convert 92 elements (including heavy metals like aluminum and mercury) and 146 compounds into sulfates which the body can safely remove.

Our bodies use sulfur to transport oxygen so damaged cells can be repaired and new healthy cells can be formed. Sulfur helps cell membranes manage the constant ebb-and-flow of nutrients and waste products. Without

sufficient oxygen, our bodily system breaks down and we become susceptible to modern diseases like cancer.

The Racehorse Trainer's Secret Weapon

Competitive horse racing is a field where MSM has been used as a health aid for years. Trainers have found that giving MSM to their prized steeds prior to races and workouts lessens the risk of cramping and prevents muscle soreness. In subsequent years, pet owners have noticed that their dogs and cats exhibit more energy and that their furs are soft and sleek-looking when they add small amounts of MSM to their animals' water bowls.

What Makes Our Product Different?

You may be under the impression that there's no difference in the composition and quality of organic sulfur among different vendors. MSM is just a generic term for the same product, right? Please allow me to share our advantages:

First, many MSM products on the market are heated above [sulfur's melting point of 239°F](#). Then, their MSM is usually pulverized into a powder to make it easier to ship. Finally, if your MSM consists of capsules or tablets, then you're also ingesting common anti-caking agents and fillers like silicon dioxide or calcium stearate along with the sulfur. All these additional processes effectively negate sulfur's health-giving qualities. To obtain the maximum health benefits, make sure you obtain organic sulfur crystals that are derived from the highest quality lignin (wood pulp) of pine trees.
