The Tree of Life: The Incredible Story of Sulfur

(Final Chapter of the Righteous Blood Series)

By A. True Ott, PhD, ND

In 1913, poet Joyce Kilmer wrote the oft-quoted, yet poignantly simple verse:

"Poems are made by fools like me, but only God can make a tree."

Indeed, Kilmer was right. Only God can make a tree. Trees are God's gift to the world. They provide shelter for God's winged creations – from robins to eagles. Of course, they also provide lumber for the construction of human homes – from the rustic cabin made of logs, to the grandest design envisioned by the modern architect. But what most people don't realize, however, is the fact that one of God's greatest nutritional substances, organic sulfur, is also extracted from within the tree's structural DNA, i.e. the "pulp" of the evergreen tree.

In Revelation 22:1-3 we learn the specific clues concerning this incredible antidote to pharmaceutical drugs – and therein is the key to understanding the actual meaning of the Tree of Life. Here are the clues:

Clue 1: The Water of Life would have a definite crystalline structure, and would be the primary building block of the FRUIT coming from the Tree of Life. This crystal form of water (i.e. hydrogen and oxygen molecules) would form the middle (center) and both sides of the tree of life's construction.

Clue 2: The Tree of Life crystals would in turn bear 12 singular healing fruits, each during a monthly (or moon) cycle.

Clue 3: The leaves (i.e. what the tree formed as it grew and matured) is clearly blessed and ordained by the Creator specifically for the "Healing of the Nations."

Clue 4: The Tree of Life would eventually remove the original curse – or the separation of man from the presence of God. Only a person totally healthy in mind, body, and spirit, can be free of this curse – so logically the "Tree of Life" must be a substance that detoxifies and heals the human mind and body in a powerful manner.

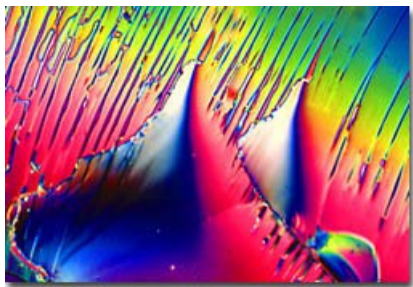

THE PROCESS OF MANUFACTURING ORGANIC SULFUR CRYSTALS

The basic chemical composition of all TREES is a complex cellular substance called Lignin. The word lignin is derived from the Latin word Lignum which means “wood”. Lignin is the basic cellulose or pulp from which paper and other similar products are manufactured. Isn’t it amazing that one of the “byproducts” (the so-called “black liquor”) of the manufacturing of paper used to print bibles and other good books, when distilled by low heat eventually forms a liquid substance called Dimethyl Sulfoxide or DMSO. Upon further low-heat distillation of the DMSO, it eventually produces pure, 100% water soluble organic sulfur in a 99.7% pure crystalline form. Could this be the substance that can literally “heal the nations”?

This is the cycle of the Tree of Life. The roots of the tree absorb minerals and nutrients from the soil. Through a complex series of biological transmutations at the atomic level, the DNA message in the cells of the tree produces the complex chain of atoms the chemist refers to as lignin – or “wood” in Latin. Lignin (wood) of course, is flammable and releases its latent thermal energy when burned. The residue is carbon-rich charcoal, which when combined with elemental earth mineral sulfur and saltpeter, forms a substance called black powder (aka gunpowder) strangely enough.

When adding fairly large quantities of pure organic sulfur crystals to pure distilled water – the TDS (Totally Dissolved Solids) of the resulting solute remains near zero! This is quite unique as a matter of fact. This shows that the organic sulfur is so incredibly water-soluble, that it becomes a part of the hydrogen and oxygen structures and as such doesn’t register as TDS ppm measurements. Furthermore, when I place a single drop of the dissolved organic sulfur water on my microscope slide, and allow it to evaporate, the remaining residue forms the most beautiful crystals I have ever seen under the microscope – crystals that reflect the pure rainbow spectrum of colors!

Here is a snapshot of the surface of one such crystal:

To me, this fills the requirements of Clue number one – the “Tree of Life” and its crystalline water structure. Remember, Organic Sulfur is derived from lignin from the pine tree. The “rainbow” of color is, to me at least, a strong clue as to its divine healing nature.
